Whole-Home Humidifiers

Create a more comfortable, healthier home

Healthy Climate® humidifiers bring balance to your home.

There's a fine balance to getting humidity levels right in your home so the air isn't too moist or too dry. And that's where a whole-home humidifier from Healthy Climate Solutions™ comes in. Working with your central heating and cooling system, it adds moisture as needed to your home's air, making it healthier and more comfortable.

Heating season: a dry time for indoor air

When cold air is heated, it expands, causing the relative humidity (RH) in your home to decrease. This may be particularly evident in the winter months, when indoor RH can drop into single digits—similar to that of the world's driest deserts!

And while that's great for cactus plants, a dry environment can adversely impact your health, home and overall level of comfort.

Health

Many viruses and germs thrive in dry conditions, which can increase the likelihood of catching colds and other respiratory illnesses. Air dryness can also lead to nosebleeds and sinus headaches.

Comfort

Too little moisture in the air can make your home feel cooler, even at normal temperatures. On top of feeling chilly, you may experience the unpleasantness of dry skin, chapped lips and static shocks.

Home

Overly dry air can pull moisture out of common household materials like plaster and wood. Over time, this can result in damaging, unsightly cracks to ceilings, walls and floors. Dry air in the home can also cause damage to artwork, furniture, musical instruments, antiques and other valuables.

Signs the humidity in your home may be too low:

- Frequent allergies or respiratory illnesses
- Scratchy, sore throat or excessive cough
- Dry, irritated nasal passages
- Dry, itchy skin
- Chapped lips
- Static shocks
- Cracked, peeling wallpaper
- Warped or cracked wood
- Damage to household furnishings

more moisture means more

comfort

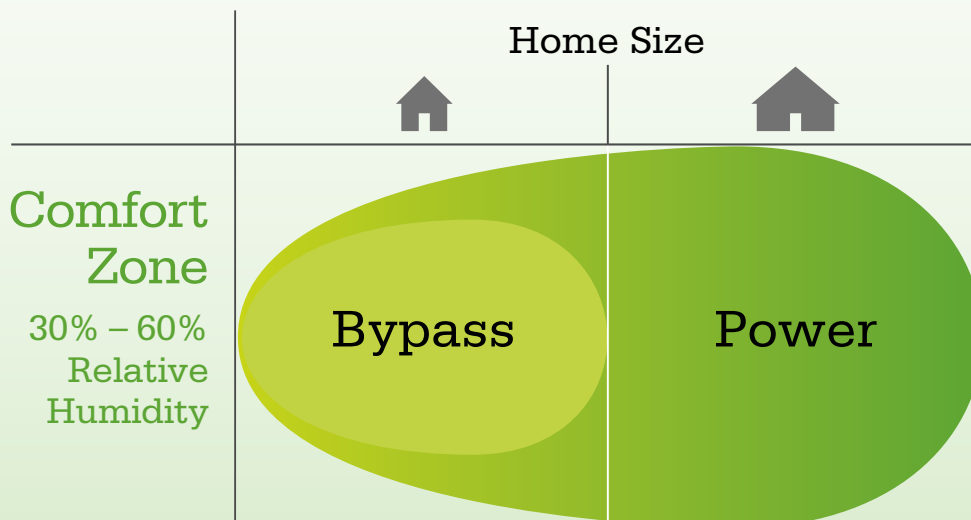

A soothing solution

According to national studies, your home's relative humidity levels should range between 30% and 60% for optimal comfort and health.

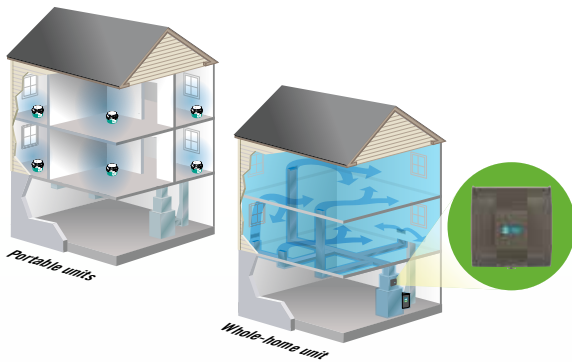

Lennox offers a variety of whole-home humidifiers—including Bypass or Power—to help maintain proper moisture levels. A humidifier also allows you to lower your thermostat and save on heating bills because humidified air feels warmer than dry air at the same temperature.

Peace-of-mind protection

All Healthy Climate Whole-Home Humidifiers come with a 5-year limited warranty on all covered components.*

Healthy Climate Whole-Home Humidifiers vs. portable units.

Healthy Climate humidifiers add the right amount of moisture to your home while offering greater comfort than portable units. Installed directly to your indoor heating and cooling system, whole-home humidifiers provide an easier-to-use and less intrusive option—with no need to continually refill and clean them. Portable units must be placed in every room to match the comfort of a whole-home humidifier and require constant refilling. Plus, they can quickly become clogged with dirt, bacteria and mold, resulting in more frequent cleaning.

Power Humidifier

Equipped with a built-in fan, a Power Humidifier circulates humidified air. Since it works independently of your HVAC system, it can deliver humidity even when your system isn't running.

HCWP3-18
Power Humidifier
18 gallons per day

Bypass Humidifiers

Bypass Humidifiers work in conjunction with your HVAC system, using the air handler or furnace fan to direct humidified air throughout the home.

HCWB3-17
Bypass Humidifier
17 gallons per day

HCWB3-12
Bypass Humidifier
12 gallons per day
